

Bilateral Consultative Commission
Agreement Number 1

On Procedures for Conducting Demonstrations of Recording Media and/or
Telemetric Information Playback Equipment

The Delegation of the United States of America to the Bilateral Consultative Commission and the Delegation of the Russian Federation to the Bilateral Consultative Commission,

Acting in accordance with the Treaty between the United States of America and the Russian Federation on Measures for the Further Reduction and Limitation of Strategic Offensive Arms of April 8, 2010, hereinafter referred to as the Treaty,

Taking into consideration that the Parties have conducted the initial demonstrations, required by the Treaty, of recording media and telemetric information playback equipment,

Have agreed as follows:

The Parties shall conduct subsequent demonstrations, in accordance with the Treaty, of recording media and/or telemetric information playback equipment using the following procedures:

1. During the demonstration the providing Party shall:

(a) describe its telemetric signal conversion processes (from reception to recording) associated with the recording medium and telemetric information playback equipment to be demonstrated, or provide data on telemetry systems that enable the conversion of telemetric information contained on the recording medium to the form (format) that originates on board the missile before broadcast;

(b) demonstrate each type of recording medium to be provided to the receiving Party in accordance with subparagraph 6(a) of Part Two of the Annex on Telemetric Information to the Protocol to the Treaty, hereinafter referred to as the Annex on Telemetric Information. Each such recording medium that is being demonstrated shall contain a recording of the following examples of telemetric information:

(i) actual telemetric information that was broadcast during the launch of an ICBM or SLBM; or

(ii) information with characteristic features of telemetric information that is broadcast during the launch of an ICBM or SLBM.

In this connection, the recording contained on the recording medium that is being demonstrated must be suitable for demonstrating the playback of the telemetric information on the appropriate telemetric information playback equipment;

(c) describe each type of recording medium that is being demonstrated, as well as describe the recording methods and formats that are used for each type of recording medium;

(d) demonstrate all the telemetric information playback equipment in a manner that allows the receiving Party to observe a display or indicator that demonstrates that the telemetric information playback equipment is operating properly. Such telemetric information playback equipment shall be demonstrated in operation using all the types of recording media that are being demonstrated in accordance with subparagraph (b) of this paragraph;

(e) answer questions of the receiving Party pertaining to its ability to play back telemetric information recorded on the demonstrated recording media;

(f) for the examples of telemetric information recorded on the recording media that are being demonstrated, provide corresponding illustrative examples of summaries of each of the demonstrated recording media that meet the requirements of paragraph 2 of Part Three of the Annex on Telemetric Information, and corresponding illustrative examples of interpretive data for the telemetric information that meet the requirements of paragraph 5 of Part Three of the Annex on Telemetric Information.

2. Upon completion of the demonstration, the providing Party shall provide to the receiving Party all the demonstrated recording media with the examples of telemetric information recorded on them, examples of summaries of each of the demonstrated recording media and examples of interpretive data for the telemetric information on the recording media, as well as other information that is additionally provided in order to achieve the objectives of the demonstration.

3. The demonstration must be sufficient for the receiving Party to be able to get an idea of the full set of telemetric information playback equipment, as well as the technical

requirements necessary for playing back the examples of telemetric information recorded on the demonstrated recording media.

4. During the demonstration the procedures for playing back telemetric information shall be demonstrated. The providing Party shall provide a description of those types of modulation, methods, modes, and recording formats, as well as methods for encoding telemetric information contained on recording media that allow the receiving Party to convert the telemetric information contained on the recording medium to the form (format) that originates on board the missile before broadcast.

5. Ambiguities and unresolved questions in connection with the demonstration shall be considered within the framework of the Bilateral Consultative Commission.

6. The provisions of paragraphs 2-6 of Part Six of the Annex on Telemetric Information, which are applicable to the trainee team members, shall also apply to representatives of the receiving Party participating in demonstrations.

7. This Agreement shall enter into force as of the date of signature and shall remain in force so long as the Treaty remains in force.

Done at Geneva on February 7, 2012, in two originals, each in the English and Russian languages, both texts being equally authentic.
